

Directed Graph Demonstration Script

```
clear; clc; close all;
```

Step 1: Define the directed graph

Nodes represent vertices, and edges represent directed connections.

```
G.edges = [  
    1 2 4;  
    1 3 1;  
    2 3 9;  
    3 4 7;  
    4 2 8  
];  
G.vertices = 1:4;  
G.n = 4;
```

Step 2: Display the graph structure

```
visualize_directed_graph(G)
```
